Make [Food](#) Your Friend Instead Of Your Enemy!

Chapter 1:

Why We Have The Problems We Get Into

Synopsis

In today's world, seldom do any [health](#) and [fitness](#) plans [work](#).
What's the reason for their alarming rate of failure?

The world is a lot less healthful than it was two decades ago. Much
this is attributed to the altered [food](#) habits of individuals.

What Happens

If we hear about the failure of [diets](#) or gym plans all around us, commonly it isn't their fault. Commonly it is the fault of the individuals who started with much commotion about going through these plans, telling all their acquaintances and co-workers about it, and then didn't abide by those programs. The individuals who abandon the exercise or diet halfway do not see the advantages, naturally, and everybody blames the plan.

What the world needs nowadays isn't a fresh health or [fitness](#) program or a diet, but it requires motivation. It needs the correct sort of mind-set to follow through with whatever plan they have chosen to the very end.

If they can do that, most of the [health](#) issues that are related to life-style situations will get to be outmoded. And we don't have to visit the corners of the earth to discover this motivation. The motivation lies right here, inside us; we simply need to search it out and utilize it.

One generation ago, individuals wouldn't dream of picking up whatever junk [food](#) they could get in order to feed their [faces](#).

Nowadays, we do that so very casually. "I'm hungry" commonly means "I want a burger or a hot [dog](#), likely with chips on the side and some cola." And, "I am on a [diet](#)" means "I am on a chemically ridden pill which will defeat my hunger and deprive my [body](#) of vitamins."

It's genuinely no wonder that we are facing so many health issues today.

Our [health](#) is an indicator of what we consume. The sorry condition that we're living in isn't an individual problem; it's a global issue. The world as a whole is eating incorrectly. Six in every ten individuals in the US is [overweight](#), and the number is going to be eight in every ten individuals by the time we hit 2015.

Are we truly thinking about this? We aren't. Even as you're studying this [eBook](#), you likely have a packet of chips on the side. Do you know that what you spent on that package, which is filling your stomach with some of the most toxic chemicals known to humanity, could instead have fed an emaciated youngster in Ruanda?

But it's not simply about being philanthropic. It's about ourselves too. Yes, we have to be selfish. With such appalling health figures, aren't we heading for doom? We're definitely not [eating](#) right. Whatever excess baggage that brings - obesity and the assorted ill health in its wake - we have to be prepared for it.

So the next time you see that a program has failed or is receiving a lot of criticism, remember that the criticism isn't probably because the program stands on shaky ground. In most cases, it is because people began with great intentions and then did not follow the program as they should have.

Chapter 2:

Changing The Mentality

Synopsis

The most crucial thing that you need to keep your [health](#) and [fitness](#) program alive - even more crucial than an instructor or a [doctor](#) is your own motive.

You have to be determined to scrutinize the situation. So, you're [overweightd](#) and are looking at casting off a few pounds. No gym instructor from anyplace in the world will help you if you don't take adequate measures to have the right [diet](#) and to stick to your routine exercise.

Even if you're sick and are looking at [treatment](#), no physician will help if you aren't determined in following the treatment platform, whether it's taking the medication at the correct time or abstaining from some [foods](#).

Alter Your Thinking

We have strayed horribly with our eating habits thus far. Unless we take stock of the state of affairs and take matters in our own hands, matters are not going to get better.

The number 1 thing is awareness. We have to learn what foods are correct for us and what are not. We have to go [back](#) to training and comprehend what the nutrients are that your body truly wants and in what [amount](#).

Then we have to build a dietary regimen for ourselves and our loved ones so that we eat healthier. We have to cut down on all the foods that are adverse - the [sugars](#), the [fats](#), the carbohydrates, we don't truly want them - and incorporate foods that may boost our [health](#).

This does sound too preachy, I understand. But that's the only reprieve we have got. If we continue munching on Oreos, we're never going to get better.

But there's hope. Hope lies in the fact that there are a lot of foods out there that are simply as tasty as those awful junk foods but we don't yet know about them.

These are the foods that we don't know about yet, we likely don't care for them or as we don't know how to fix them, but a healthy [cookbook](#) may help you in understanding assorted interesting ways to healthy [cooking](#).

Even with the same sort of [diet](#) you eat, you are able to conjure up some really delicious healthy dishes. Yes, it's all very much possible.

You are able to modify your [eating](#) habits to a big extent, while at the same time attending to your palate.

The fact is that the [weight](#) loss industry is responsible in a really significant way towards this downfall of the developed [human](#) race. They have to keep selling their Atkinses and Jenny Craigs and Zones and Medifasts and for that reason the media never tells you how we may in reality take things in your own hands.

They show us glitzy before-after pictures of a person with a foot-long sub and then the same guy with 6 pack abs and tell us that the [diet](#) made that possible.

However the fact is, if we were to get our head together, we may very easily do that too, without having to spend 1000s of [dollars](#) on those [diets](#). And what do we have to do?

2 general things:-

Control what we consume.

Indulge in physical exertion.

Now, is that too much to accomplish? Don't we owe that to our body that has served us so well all these years? Don't we owe that to ourselves and our loved ones?

Chapter 3:

Advantages Of Eating Right

Synopsis

Here is all the motive you'd require to continue [eating](#) healthy.

A lot of [foods](#) nowadays are toxic because of the synthetic chemicals present in them. When you're attempting to eat correctly, you are much less likely to get these toxins into your body as one of the basic dogmas of [eating](#) correctly is that you shouldn't eat anything that's man-made.

In addition to that, if you eat less, you'll likewise be able to reduce on vices like [smoking](#) and alcoholism. A glass of beer is almost synonymous with a night out with the boys. Chapter 4:

How To Eat Healthy

Synopsis

There are a lot of popular [diets](#) on the market nowadays, but most of them are unhealthy and occasionally even unsafe. This will explain how to eat a healthy, balanced [diet](#) for life and keep away from unhealthy diets.

Get Going

Ascertain how many calories your body requires to function every day.

This number may vary wildly, depending on your [metabolism](#) and how physically active you are. If you're the sort of individual who puts on ten pounds simply smelling a slice of [pizza](#), then your every day caloric intake ought to stay approximately 2000 calories for men, and 1500 calories for women.

Your [body](#) mass likewise plays a part in that: More calories are appropriate for naturally bigger individuals, and fewer calories for littler individuals. If you're the sort of individual who can eat without gaining a pound, or you're physically active, you might wish to increase your daily caloric intake by 1000-2000 calories, a bit less for women.

Don't dread fatty foods.

You have to consume [fat](#) from [foods](#) for your body to run correctly. But, it's crucial to pick out the correct sorts of [fats](#): Most [animal](#) fats and a few vegetable oils are high in the sort of fats that raise your LDL [cholesterol](#) levels; the foul cholesterol.

Different than popular belief, eating cholesterol doesn't inevitably bring up the amount of cholesterol in your body. If you provide your body the correct tools, it will flush extra cholesterol from your body. Those tools are monounsaturated fatty acids, which you ought to try

to consume regularly. [Foods](#) that are rich in monounsaturated fatty acids are olive oil, nuts, fish oil, and assorted seed oils.

Eat plenty of the correct carbs.

You have to eat foods high in carbs since they're your body's chief source of [energy](#). The trick is to pick out the correct carbs. Simple carbs like [sugar](#) and refined flour are quickly absorbed by the body's gastrointestinal system.

This induces a sort of carb overload, and your body releases vast [amounts](#) of insulin to battle the overload. Not only is the excess insulin bad on your heart, however it encourages [weight](#) gain. Eat plenty of carbs, but consume carbs that are slowly digested by the body such as whole grain flour, veggies, oats, and unprocessed grains.

Eat bigger meals early on in the day.

Your [metabolism](#) decelerates toward the end of the evening and is less efficient at digesting foods. That means more of the power stored in the food will be stacked away as [fat](#) and your body won't absorb as many nutrients from the meal. Try eating a medium-sized meal for [breakfast](#), a big meal for lunch, and a little meal for dinner. Better yet, attempt consuming 4-6 small meals over the run of your day.

Provide yourself a cheat meal.

Cheating doesn't mean gorging on all the wrong foods once a week; it implies enjoying a food you truly love once a week. Have a couple slices of pizza on Sundays, or a huge slice of double chocolate [cake](#) on Saturdays. This cheat meal will help you stick with the change in [diet](#),

and in a few ways it's really good for your [body](#). Special occasions, like birthdays in the family, count as cheat [meals](#).

Get the habit of eating slowly.

It will satisfy you with fewer calories and will forestall overeating and obesity with all its consequences.

Drink plenty of H₂O.

It makes you feel more awake and energized, does wonders for your [skin](#) and makes you feel fuller so you wind up [eating](#) less! Cutting down soda and replacing it with [water](#) will do wonders for you.
